

State center of Tibetan medicine is the only national hospital in Beijing, where the implementation

State center of Tibetan medicine is the only national hospital of Beijing, which carried out the integration of the Tibetan Chinese and Western medicine. Formed in 1992, the centre is rapidly developing and demonstrates medical direction of all ethnic groups of China. Since the founding of the center focused on the selection of qualified personnel. Our center has a large team of specialists known not only in China but also outside it includes doctors of Tibetan traditional Chinese medicine and specialists in Western medicine. Currently, the center has several branch offices of the Tibetan medicine Department of gynecology andrology gerontology neurology therapy of spine Oncology international office and drugievredonosnye centre of Tibetan medicine with modern equipment with high diagnostic capabilities for precision diagnosis and treatment of various diseases digital x-ray apparatus ultrasound diagnostic devices, automatic biochemical analyzers, and more are required to install the exact diagnosable the basis of the state center of Tibetan medicine being the research and development of new medicines to help patients. Basic principles of diagnosis in Tibetan and traditional Chinese medicine are the identification of the disturbed balance of internal energy the pulse diagnosis physical examination of the patient which exhibited the diagnosis and further confirmed by instrumental methods of diagnosis. Upon completion of diagnosis are assigned to a set of procedures and selection of medicinal herbs. Herbs are selected for each patient individually as treatment and follow up physician offices helping to prevent the side effects of these drugs to target and treat the disease. These herbs are prepared at the factory with special technology for ease of transportation and preservation of their medicinal properties. Before the results of individually selected herbs that are taken at home are preceded by a complex of medical-improving procedures, correcting the functioning of vital organs cardiovascular system digestive tract nervous system spleen the organs of the endocrine system, etc. contribute to the normalization of metabolic processes in the blood pressure lowering cholesterol, strengthening blood vessels detoxifying salts from the body. These procedures also help restore flexibility and plasticity of joints and ligaments of the musculoskeletal system. In Beijing doctors the past many years of training in Tibet in addition 1 every quarter come
